Project description:

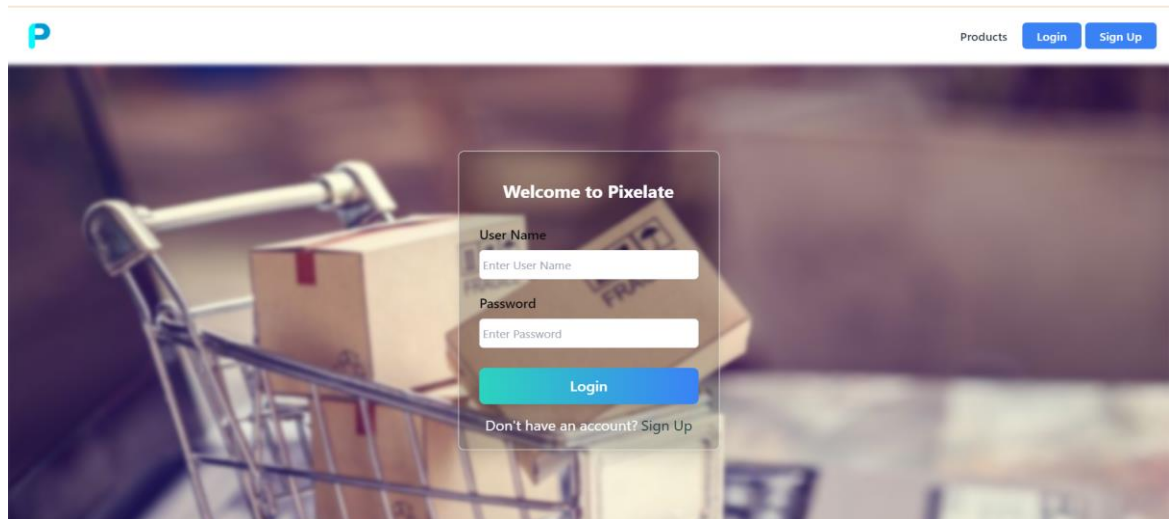

Pixelate is a web-based art gallery platform designed to offer users a seamless experience when exploring, managing, and purchasing unique artwork. This application showcases an elegant and modern design with interactive features, making it ideal for art lovers, collectors, and general users interested in artistic exploration.

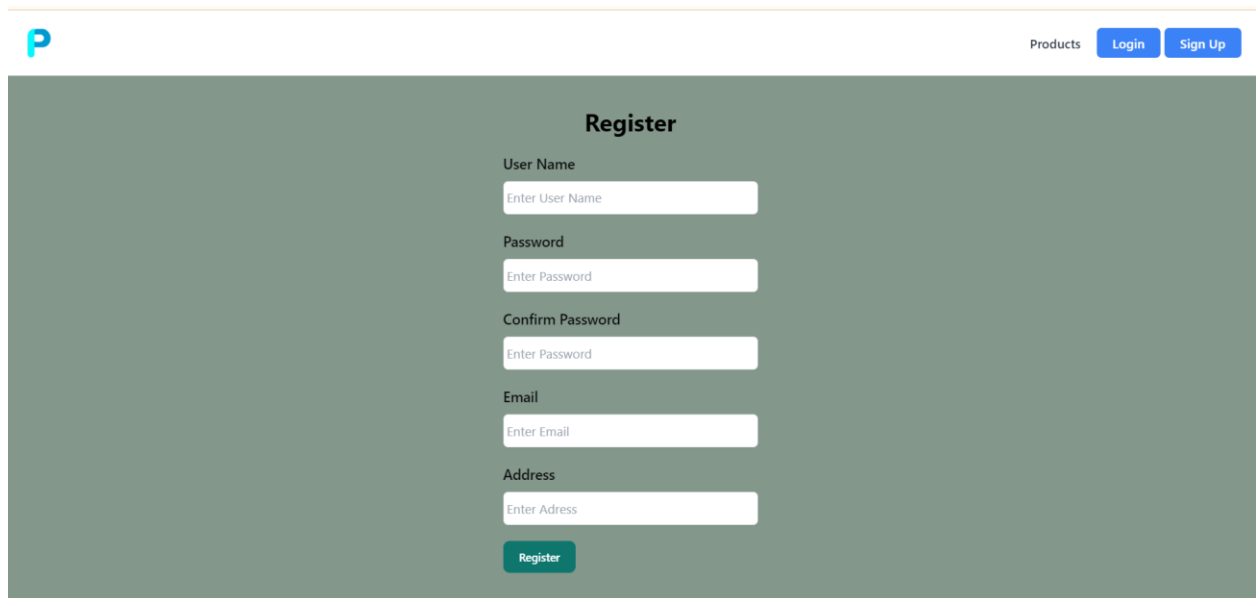

Key Features

❖ User Authentication:

- Users can register, log in, and securely manage their profiles.
- The registration process includes validations for email, password strength, and other required fields to ensure a secure user environment.

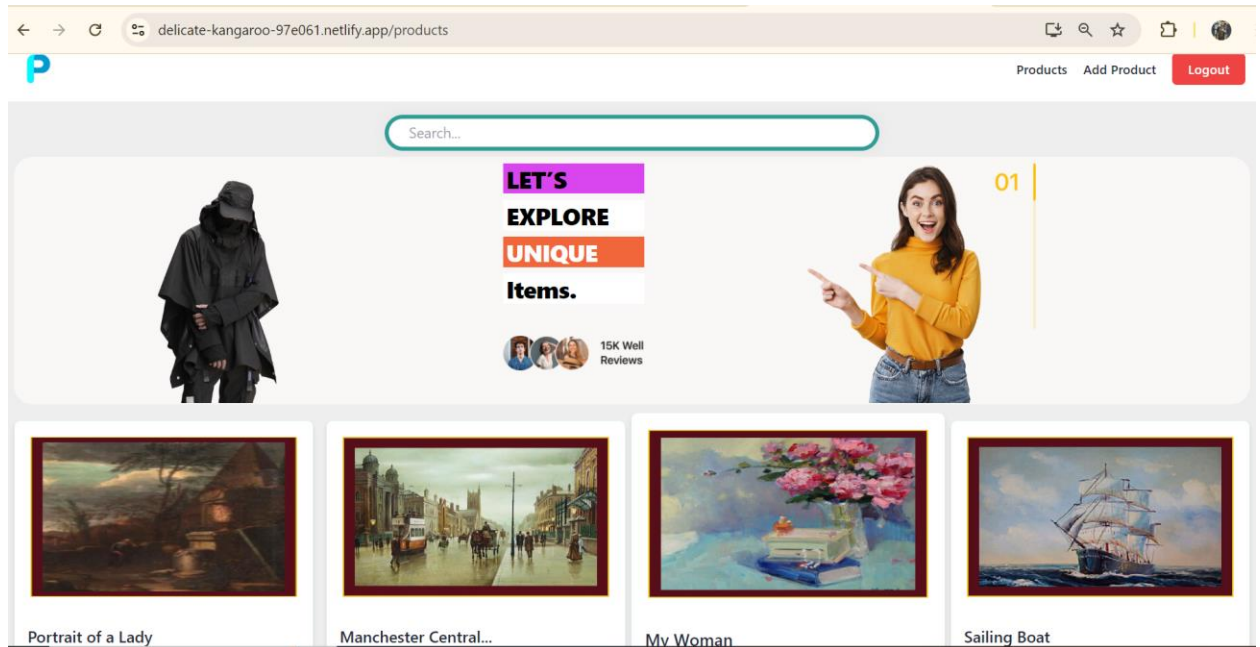

The screenshot shows the login interface of the Pixelate website. At the top left is a blue 'P' logo, and at the top right are links for 'Products', 'Login', and 'Sign Up'. The main background is a blurred image of a shopping cart filled with cardboard boxes. A white login form is centered on the page. The form has a title 'Welcome to Pixelate', followed by a 'User Name' label and an input field with the placeholder 'Enter User Name'. Below that is a 'Password' label and an input field with the placeholder 'Enter Password'. A blue 'Login' button is positioned below the password field. At the bottom of the form, there is a link that says 'Don't have an account? Sign Up'.

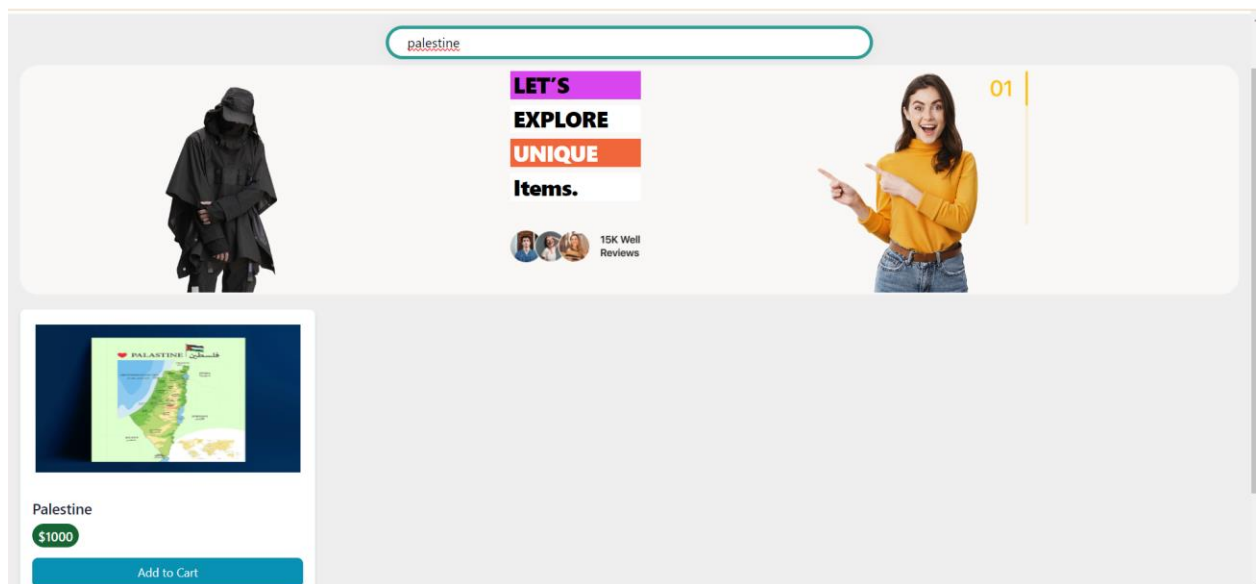

The screenshot shows the registration interface of the Pixelate website. At the top left is a blue 'P' logo, and at the top right are links for 'Products', 'Login', and 'Sign Up'. The main background is a solid dark green color. A white registration form is centered on the page. The form has a title 'Register', followed by a 'User Name' label and an input field with the placeholder 'Enter User Name'. Below that is a 'Password' label and an input field with the placeholder 'Enter Password'. This is followed by a 'Confirm Password' label and an input field with the placeholder 'Enter Password'. Below that is an 'Email' label and an input field with the placeholder 'Enter Email'. This is followed by an 'Address' label and an input field with the placeholder 'Enter Address'. A green 'Register' button is positioned below the address field.

❖ Art Gallery Product Display:

- A well-designed product gallery allows users to explore various pieces of artwork.
- Each product is showcased using visually appealing product cards with images, titles, and descriptions.

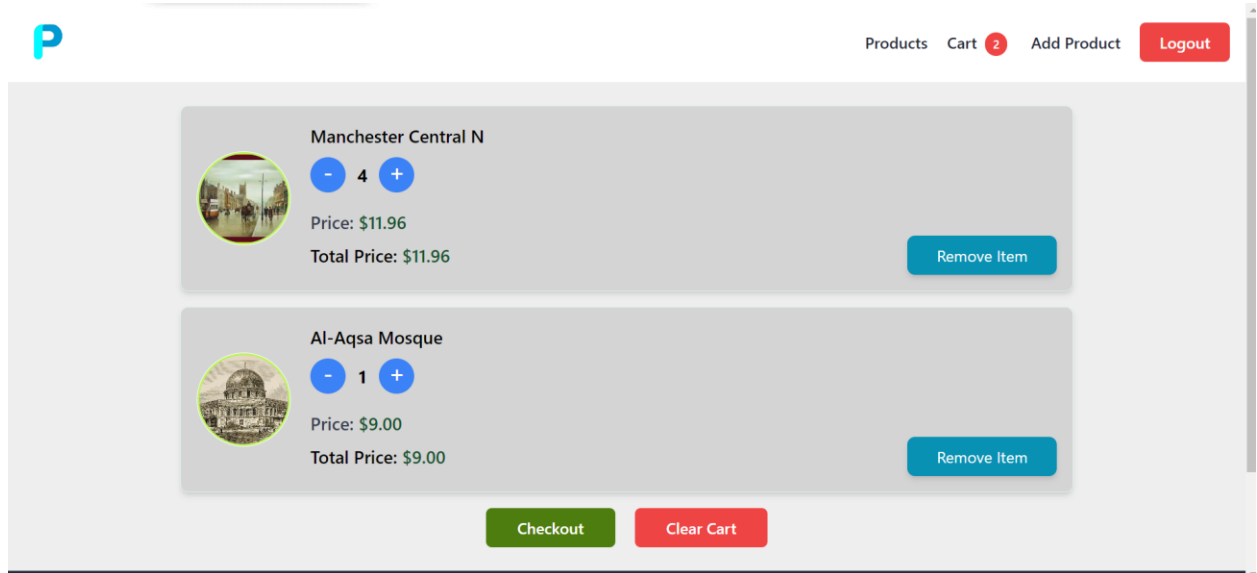

- A powerful search functionality enables users to find specific items quickly.

❖ Cart and Checkout Experience:

- Users can add artwork to their cart, view selected items, and manage them easily.
- An intuitive checkout system provides a celebratory animation (confetti) upon successful order placement.

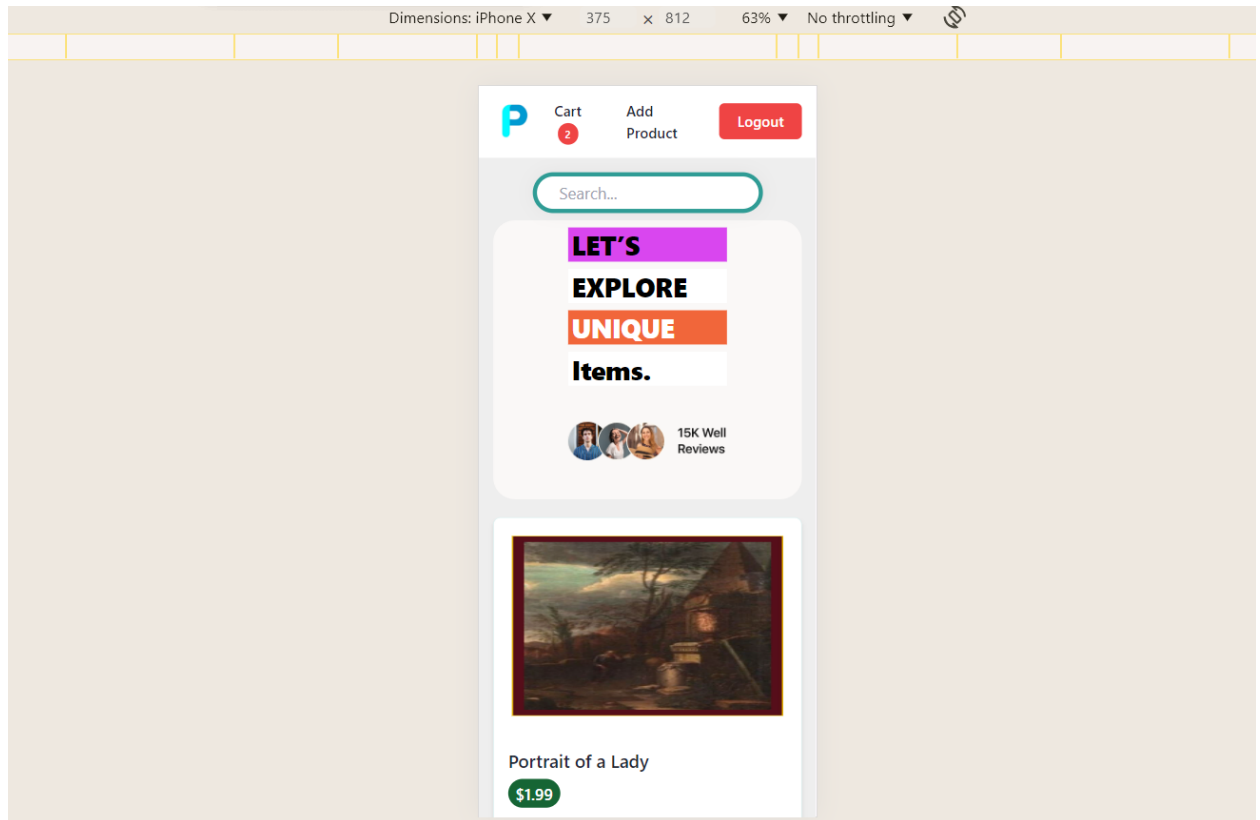

- Cart management options include clearing the cart and proceeding with a checkout.

❖ Responsive Design:

- Pixelate is built with a mobile-friendly layout using Tailwind CSS, ensuring that users have a great experience on any device, whether desktop, tablet, or mobile.

- The application incorporates a visually consistent theme with custom colors and a sleek interface.

❖ Loading and Error Handling:

- The application handles loading states with a custom loader to keep the user informed while data is being fetched.
- Error states are displayed in a user-friendly manner to guide users in case of connectivity or form validation issues.

❖ Backend API Integration:

- Pixelate communicates with a backend API to manage data, such as fetching products, handling user authentication, and processing user orders.
- The backend ensures that all user actions are securely managed, making Pixelate both reliable and efficient.

❖ Technical Stack :

- The frontend is built using React for a dynamic user experience, React Router for smooth navigation, and hooks for efficient state management.

- Additional libraries like React-hook-form, formic and `yup` are used for handling forms and input validation.
- Tailwind CSS adds style flexibility, enabling easy customization and a consistent design language.

Thanks For Your Time
